# POLYSTONE

*Experience Custom Luxury*™

## CREATIVE FREEDOM

POLYSTONE is a non-porous polymer product blended with specially formulated acrylic modified polyester resins and fillers. This blend of raw materials creates a material that resembles stone but can be cut and machined like wood. POLYSTONE'S colour and pattern run throughout its thickness, giving it a soft translucent appearance with a distinctive natural feeling of warmth and solidness. Add a custom inlay or create a unique edge treatment. With POLYSTONE'S creative freedom, it's easy to put your personal signature on your dream kitchen.

*Your dream matters; invest in it with POLYSTONE!!*

## UNMATCHED HYGIENE

POLYSTONE is 100% non-porous, providing hygienic stain resistance in all areas, including those subject to repeated moisture and food contact. Our unique fabrication system creates a seamless appearance which has no crevices where the material is joined. This eliminates opportunities for bacterial, mildew and fungi growth.

*Your health matters; invest in it with POLYSTONE!!*

## ENDLESS APPLICATIONS

Primarily used for kitchen and bathroom counter tops, it can also be used for interior wall cladding, shower and tub surrounds, fireplace fronts and hearths, furniture, table tops and signage. Because of its non-porous characteristic, which does not support bacterial growth, and its seamless construction, it is particularly practical for use in restaurants, hospitals, pharmacies and other commercial and institutional applications.

*POLYSTONE is made to withstand the toughest situations!!*

## COLOURS GALORE

An unlimited palette of colours are available in solid colours, marbled and the granite look. For a minimal charge, custom colours can be matched to customers requirements. Solid and granite colours can be combined to create a totally unique appearance. Granite colours, because of its appearance, are the most practical and easiest to maintain for kitchen counter tops or any counter top used as a working surface. Dark colours are not recommended for counter top use as continual maintenance will be required. Wear marks, scratches, finger prints and blushing will require a lot of additional maintenance. Dark colours will only be manufactured with the customer understanding these conditions.

*POLYSTONE's countless colours allow you to envision any dream!!*

## FINISHES

A luxurious matte finish is standard, which is also the most practical and maintenance free for all working surface counter tops. A rich high gloss finish is also available.

*POLYSTONE puts the finishing touch on your cabinets!!*

## SOME OF POLYSTONE'S ADVANTAGES

POLYSTONE'S advantages over other solid surface manufacturers such as Corian, Avonite, Fountainhead, Solidex, Nevamar, Gibraltar and Karadon are the following:

- Unlimited colour range; more choices & more flexibility than any other surface material.
- Counter top thickness is approx ¾", not ½" like other manufacturers. If seams are required, POLYSTONE seams are up to 50% stronger due to its ¾" thickness.
- POLYSTONE seams are always done with retained material of the original matrix, which always ensures the best possible Match. Also, we custom pour to minimize seam requirements.
- POLYSTONE is manufactured, fabricated and installed by THE MARBLE FACTORY in Winnipeg. No other major manufacturer can offer this ideal combination of product, service and consultation!

*POLYSTONE Solid Surface, you can take it for granite!!!*
